Please install Configure Program Driver from Factory Tools Package on your computer before start this firmware upgrade.

If the Configure Program Driver is installed successfully, you can follow these steps to finish upgrading your XING devices:

1. Unplug the XING USB device.

2. Press and hold the **setting mode enter button** (pointed by red arrow in following picture), then plug the device to the computer. Release the button after 2 or 3 seconds.

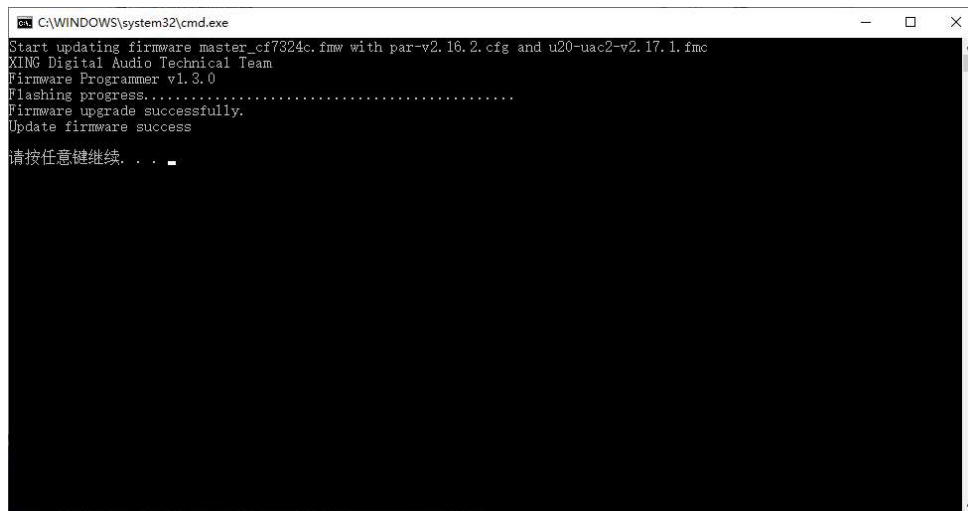

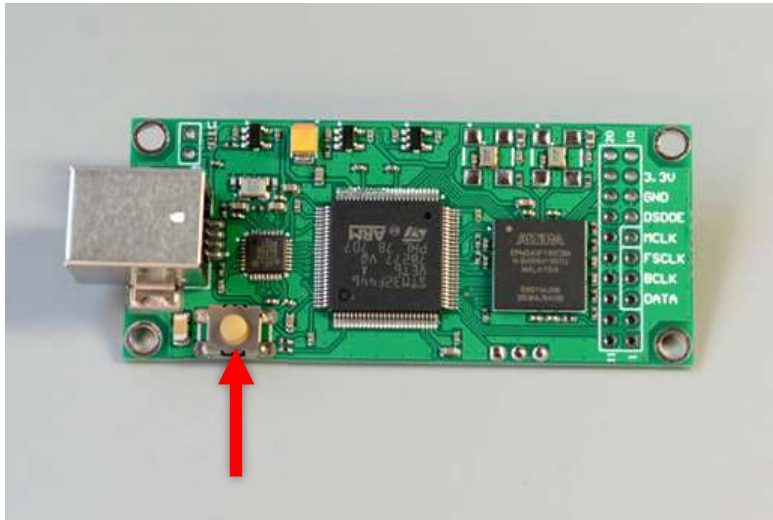

3. If the device is detected successfully, you can find an item called **USB HiRes Audio F-20 Configuration** under **libusb-win32 devices** on Windows Device Manager. Now the device is ready for being upgraded.

4. Double click **_Start_Upgrade_Firmware** program file from this package to start the upgrade process.
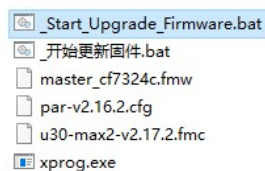

5. Wait about 10 or 15 seconds to finish the process. At the end, press any key to close the upgrade window.

6. Unplug the XING device to exit configuration mode. It is ready for use now. Enjoy the Music.
